

GOOD FOR FRUITING TREES.

Poinsh in wood ashes is considered especially good for fruiting trees. Apply in late whiter or in spring. Many orchardists alternate between barnyard manure and wood ashes, or commercial fertilizers of some kind. This is a good practice.

GRADE APPLES HONESTLY,

Let those who barrel apples bear in wind that it does not pay to mix inferior grades with better stock, and ry to pass them off in the middle of the barrels. Purchasers are much more watchful than formerly, and your whole stock is liable to be graded down to the lowest.

WINTER CULTIVATION,

Orehard cultivating can be done to advantage in winter. Surface soil should be stirred and made fine to admit air and moisture readily in the growing season. Summer cultivation must necessarily be rather shallow, for fear of disturbing the feeding roots, which are rather near the surface, The danger is not present in winter, and it is a good time to break up the soll deeply. The surface may first have its conting of manure and then be turned lightly under. It need not be harrowed smooth-the rains and frost will do that to perfection.

TO SAVE AN AXE HANDLE,

A simple device is shown in Fig. 1 to save an axe handle from wearing out at the weakest point, and is very easily made by taking the end of a

tip can, bending it at the dotted line and tacking it on the axe handle at letter A. It is easily and quickly done, and will well repay any one for the time and trouble.-K. Jarrell, in The Epitomist.

TO PLANT LILY BULBS.

A woman from Worcester, Ohio. wishes to know when to plant her Hly bulbs and how to pot her hyacinths for winter bloom. The only rule about Illies is to get them into the ground as soon after digging as possible. Most of them should be planted five or six inches deep; auratum and others should go eight or nine inches deep. Candidum must be set just as it comes out of the ground, with the new green Yaves spread over the surface. The only secret about hyacinth potting is to have plenty of charcoal or broken pottery in your pots, and fill up with peaty soil and sand, or with old soil well rotted. A housewife who wants good soil for her plants should keep a little pile of sod in an out of the way corner, rotting; then mix with it for tse some nice, clean sand, about one-Third. Hyncinths, when potted, should be set in the cellar or some dark room for about three weeks. Bring them to the light three or four weeks before they are wanted. Where the stalks begin to bloom too low down, wind about a funnel of paper, and crowd it down into the dirt. The stalks will en elimb up through to get light,-New York Tribung Farmer.

No insect is so destructive to the foliage of walnut and butternut trees as this. It is a large blackish, hairy caterpillar that attacks the leaves dur-Ing summer. It is the larvae of a goodsized moth that makes its appearance from the middle of June to about July 1. and deposits seventy to 100 eggs on the under surface of the leaves. In a short time the larvae hatch and begin feeding upon the foliage. They increase rapidly in size and in a few weeks attract attention on account of the defoliated twigs where they have be a at work. These caterpillars are greerlovs in habit, and at the time of molting or easting of the old skin to give place to a new one, they migrate in a body to the trunk of the tree, frequently descending nearly to its base. Piling themselves one upon another, they remain in a mass until process is completed, then they

THE WALNUT CATERPILLAR.

ing agair. When fully grown the caterplilars go into the ground and change to the pupa state just beneath the surface. Here they remain until early the following summer, when they emerge as moths to lay eggs for another brood. WI thever the heaps of moulting larvae are accessible they should be crushed. If this is not practicable on account of the height they molt, a charge or two of small-sized bird shot can be fired into them with good effect. They may be killed by spraying with the arsenites, but this is difficult on large trees. - P. W. Humphreys, in American

BEAUTY AND PURITY Ancient and Modern Ideas on the Subject. Time and Disease the Effacing Agents

of Beauty. What Has Science Done to Restore the Lily and the Rose?

Socrates called beauty a short-lived tyranny, Plato a privilege of nature, Theocritus a delightful prejudice, Theophrastus a slient cheat, Carneades a solitary kingdom, Homer a glorious gift of nature, Ovid a favor of the gods. Aristotle affirmed that beauty was better than all the letters of recommendation in the world, and yet none of these distinguished authorities has left us even a hint of how beauty is to be perpetuated, or the ravages of age and disease defied. Time soon blends the lily and the rose into the pallor of age, disease dots the fair face with cutaneous disfigurations and crimsons the Roman nose with unsightly flushes, moth, if not rust, corrupts the glory of eyes, teeth, and lips yet beautiful by defacing the complexion, and fills the sensitive soul with agony unspeakable.

If such be the unhappy condition of one afflicted with slight akin blemishes, what must be the feelings of those in whom torturing humors have for years run riot, covering the skin with scales and sores and charging the blood with polsonous elements to become a part of the system until death? It is vain to attempt to portray such suffering. Death in many cases might be considered a blessing. The blood and fluids seem to be linpregnated with a flery element which, when discharged through the pores upon the surface of the body, inflames and burns until, in his efforts for relief, nails, and not until the blood flows does sufficient relief come to cause him

Thus do complexional defects merge into torturing disease, and piqued vanity give place to real suffering. Λ little wart on the nose or cheek grows to the all-devouring lupus, a patch of tetter on the pain of the band or on the limbs suddenly envelops the body in its fiery embrace, a brulse on the leg expands into a grawing ulcer, which reaches out its fangs to the sufferer's heart in every paroxysm of pain, a small kernel in the neck multiplies into a dozen, which eat away the vitality, great pearl-like scales grow from buile rash-like inflammations in such abundance as to pass credulity; and so on may we depict the sufferings to which poor human nature is subject, all of which involve great mental distress because of personal distigurations.

If there were not another external disease known, eczema alone would be a sufficient luffiction on mankind. It pervanes all classes, and descends imsome are constantly enveloped in it, others have it confined to small patches in the ears, on the scalp, on the breast, on the paims of the hands, on the limbs, etc., but everywhere its distinctive feature is a small watery blister, which discharges an acrid fluid, causing beat, inflammation, and intense itching. Ring-worm, tetter, scalled head, dandruff, belong to this scaly and itching order of diseases. Psoriasis, our modern leprosy, with its mother-of-pearl scale, situated on a reddened base, which bleeds upon the removal of the scale, is to be dreaded and avoided, as of old. Impetigo, barber's itch, eryslpelas, and a score of minor disorders make up in part the catalogue of external diseases of the skin. Thus far we have made no aliusion to those afflictions which are manifestly impurities of the blood, viz.: swelling of the glands of the throat, ulcers on the neck and limbs, tumors, abscesses, and mercurial poisons, with loss of hair, because the whole list can be comprehended in the one word scrofula.

It is in the treatment of torturing, disfiguring humors and affections of the skin, scalp, and blood, with loss of hair, that the Cutleura remedies have achieved their greatest success. Orig-Inal in composition, scientifically compounded, absolutely pure, unchangeable in any climate, always ready, and agreeable to the most delicate and sensitive, they present to young and old the most successful curative of modern times. This will be conside ed strong language by those acquainted with the character and obstinacy of blood and skin humors but it is justified by innumerable succasses where all the remedies and methods in vogue have failed to care, and, in many cases, to relieve, even.

The Cuticura treatment is at once agreeable, speedy, economical, and comprehensive. Bathe the affected parts freely with hot water and Cuticura scap, to cleanse the sur ace of crusts and scales, and soften the thickened cuticle. Dry, without hard rubbing, and apply Cuticura Oin tment

to allay itching, irritation, and inflammation, and soothe and heal, and, lastly, take Cuticura Resolvent, to cool and cleanse the blood. This treatment afsleep in the severest forms of eczema and other Rching, burnleg, and scaly humors, and points to a speedy, permanent, and economical cure of terturing. disfiguring humors, eczemes, rashes, and inflammations, from infancy to age, when all other remedies and the best physicians fail. The remedies constituting the Cutleura system will repay. an individual scrutiny of their remarkable properties.

Cuticura Soap contains in a modified form the medicinal properties of Cuticura Ointment, the great skin cure and purest and sweetest of emollients, combined with the most delicate and re-freshing of flower odors. It purificaand invigorates the pores of the skin. and imparts activity to the oil glands and tubes, thus furnishing an outlet for unwholesome matter, which if retained would cause pimples, blockheads, rashes, oily, mothy skin, and other complexional disfigurations, as well as scalp affections and irritations, falling hair, and baby rashes. Its gentle and continuous action on thenatural lubricators of the skin keeps the latter transparent, soft, flexible, and healthy. Hence its constant use, assisted by an occasional use of Cuticura Olutment, realizes the fairest complexion, the softest, whitest hands, and the most luxuriant, glossy hair within the domain of the most advanced scientific knowledge to supply.

Cutleura Ointment is the most successful external curative for torturing, disfiguring humors of the skin and scalp, including loss of hair, in proof of which a single ancinging with it, preceded by a hot both with Cuticura-Soap, and followe t in the severer cases by a full dose of Cuticura Resolvent, is sufficient to afford immediate relief in the most distressing forms of itching. burning, and scaly humors, permit restand sleep, and point to a speedy cure when all other remedies full. It is especally so in the treatment of infants and children, cleansing, soothing, and healing the most distressing of infanthe humors, and preserving, purifying, and beautifying the skin, scalp, and

Cuticura Ointment possesses, at the same time, the charm of satisfying the simple wants of the toilet of all ages, in carring for the skin, scalp, hair, and hands far more effectually, most expensive of toilet emollients, while free from every ingredient of a doubtful or dangerous character. Its "One Night Treatment of the Hands," or "Single Treatment of the Hair," or use after athletics, cycling, golf, tennis, riding, sparring, or any sport, each in connection with the use of Cuilcura. Soap, is sufficient evidence of this.

Of all remedies for the purification of the blood and circulating fluids, none approaches in specific medical action Cutieura Resolvent. It neutralizes and resolves away (hence its name) scrofulous, inherited, and other humors in the blood, which give rise to swellings of the glands, pains in the bones, and tertaring, disfiguring cruptions of the skin and scalp, with loss of hair.

Cuticura Resolvent extends its purifying influence by means of the pores to the surface of the skin, allnying irritation, inflammation, itching, and burning, and soothing and healing. Hence its success in the treatment of distressing humors of the skin, scalp, and blood, with loss of halr, which fail to be permanently cured by external remedies alone.

The grandest testimonial that can be offered Cuticuta remedies is their world-wide sale, due to the personal recommendations of those who have used them. It is difficult to realize the mighty growth of the business done under this name. From a small beginning in the simplest form, against prejudice and opposition, against monfed hosts, countless rivals, and trade indifference, Cuticura remedies have become the greatest curatives of their time, and, in fact, of all time, for nowhere in the history of medicine is to be found another approaching them. in popularity and sale. In every clime and with every people they have met with the same reception. The confines of the earth are the only limits to their growth. They have conquered the

To the test of popular judgment all things mundane must finally come. The civilized world has rendered its verdict in favor of Cuticura.

CONGRESSMAN MERAISON OF OHIO.

Hon, David Meekison is well known, not only in his own State, but throughout America. He began his political career by serving four consecutive terms as Mayor of the town in which he lives, during which time he became widely known as the founder of the Meekison Bank of Napoleon, Ohio. He was elected to the Fifty-fifth Congress by a very large majority, and is the acknowledged leader of his party in his section of the State. in his section of the State

Only one flaw marred the otherwise complete success of this rising statesman. Catarrh, with its insidious approach and tenacious grasp, was his only unconquered foe. For thirty years he waged unsuccessful waviare against this personal enemy. At last Peruna came to the rescue, and he dictated the following letter to Dr. Hart-

"I have used several bottles of Peruna and I feel greatly bencnd thereby from my catarrh of the head. I feel encouraged to believe that if I use it a short time longer I will be fully able to eradteate the disease of thirty years' standing."-David Meekison, Member of Congress.
